

BITNATION
GOVERNANCE 2.0

Pangea Jurisdiction

The Internet of Sovereignty

WEBSITE: **BITNATION.CO**

TOKEN SALE: **TSE.BITNATION.CO**

TELEGRAM: **T.ME/PANGEABITNATION**

The background of the entire page is a light gray topographic map with white contour lines. The lines are more densely packed in some areas, suggesting higher elevations, and more spread out in others. The map covers the entire page, with the title and text blocks overlaid on it.

Bitnation:

A Global Marketplace for Governance

In BITNATION's world sovereignty shifts decisively from the State to the Citizen. By reducing competition between citizens for services and increasing competition between Nations for citizens we will improve the quality of governance and reduce incentives for coercion and violence. We wish you to be able to create, opt-in or opt-out of the Nation of your choice on your mobile phone.

You can choose where to access services and who to do business with based on AI generated performance criteria, and make binding agreements and resolve disputes with anyone, anywhere, without facing the high costs, time inefficiencies, legislative incompatibilities and potential coercion and arbitrariness of legacy territorial jurisdictions.

Enter Bitnation's Pangea Jurisdiction

Core infrastructure to live in our world is a **smartphonechat-based polylegal jurisdiction**. Bitnation's Pangea is an encrypted, decentralized, blockchain-agnostic incentive network powered by a ECR20 Ethereum token awarded when users (and the nations they create) fulfil agreements with one another, resolve disputes and provide quality governance services. Users can also use the token to pay for services on Pangea. This is the Pangea Arbitration Token (PAT).

We have built the first version of Pangea, a mesh network which can write smart contracts to any integrated blockchain. The first service offered on Pangea lets you create and join a Decentralized Borderless Voluntary Nation (DBVN) with a constitution and code of law of your choice. Soon new functions will be added to allow group and personal chat, write P2P smart contracts from chat, resolve disputes and access governance service DApps. Our automated and human reputation and arbitration systems and arbitrator and code of law registries will provide positive incentives for contract compliance, strengthened through network effect as Pangea attracts more users.

PAT Token Sale

We are using a reverse auction model for our token sale to allow the market to set the token price. During the auction, the token price reduces at a fixed rate and the auction ends when the hard cap is reached or after 1 month (whichever occurs first).

The price paid for PAT is the auction price at the time the sale ends. All contributors pay the same price as the last contributor (excluding bonuses).

The total PAT supply is 42 billion.

34%
will be sold in three phases of the ICO.

1. Presale - Complete;
2. Auction - March 25;
3. Slow release - Remaining tokens sold over 24 months.

18%
is allocated to founders and core contributors.

14%
is reserved for future options and bounties.

34%
will be earned on Pangea by users.
